

business analytics for Mago.Net

software solution for

Mago.Net

The business intelligence solution for Mago.Net

The “new point of view” to manage your business

Business Analytics is the business intelligence software which can provide information support for decisions and control of corporate performance from the data coming from ERP Mago.Net.

With B.A.M. you can analyze, in a simple and intuitive way, the data relating to purchases, sales and inventory management, suitably revised and made available for the analysis suite InfoBusiness.

The data extracted can be viewed and searched in different ways: tools for tabular and graphical display allow to find correlations between values, while filters and formulas allow customized extractions.

The solution is based on a platform that offers professional features of extraction and selection, combined with powerful reporting and multidimensional analysis tools of information.

Usability

- Simple and dynamic analysis of data

Completeness

- The suite allows the analysis of purchases, sales and inventory moves from data contained in ERP Mago.Net

Efficiency

- Large volumes of heterogeneous data are processed and structured to make them useful for decision-making assessment

Reliability

- A unique complete and reliable tool that allows to have always certified data

Dynamism

- Customized filters and formulas for the extraction of data

Automation

- Automated production and profiled distribution of reporting for different target
- Constant updating of information with data coming from ERP Mago.Net

Soluzioni informatiche

The technological compass for your strategic business decisions

Safety and certified extraction of data

Data coming from Mago.Net are homogenized, supplemented, processed and stored in the datawarehouse. The elaboration strategy is shared with the business management and is certified in order to always have safe and reliable data on which to perform analysis.

Easy, instantaneous and customized analysis

Starting from the datawarehouse, you can perform interactive and multidimensional analysis of data. Each user, with simplicity and flexibility, may:

- decide which facts to consider and what criteria to use;
- apply filters and formulas;
- develop synthetic and analytical tables;
- create reports or graphs.

Depending on the role covered in the company, it is possible to give a profiled access to information from top management down to operational levels.

Intelligent Information distribution

Information developed through analysis can be updated and distributed automatically and efficiently:

- to different types of destinations (mail, ftp, local or network folders);
- according to time schedules;
- according to the occurrence of specified events (exceeding of thresholds of data, etc);
- publishing the report in any format available to export.

Information can be sent via e-mail or file to other persons.

Interaction with the web

The interaction with the web allows you to create, update or export reports into folders using a simple browser: the corporate information assets is thus available at any place and at any time.

Potential target

- It's suitable for companies of every size and every sector
- It's useful for everyone who must make business decisions and analyze the performance supported by reliable information
- It's needful for who want to analyze the past and especially for who want to define and plan business strategies
